DETAILED ACTION

Prosecution on the merits of this application is reopened. See Sequence Compliance heading below. The amendment filed 19 August 2005 has been entered.

Claims 31-38 and 40-44 are currently pending.

Sequence Compliance and Objection to Specification and Drawings

This application contains sequence disclosures that are encompassed by the definitions for nucleotide and/or amino acid sequences set forth in 37 CFR 1.821(a)(1) and (a)(2). However, this application fails to comply with the requirements of 37 CFR 1.821 through 1.825 for the reason(s) set forth below. Figures 1, 2, 9, 11, and 14, and the corresponding Description of Figures in the Specification contain sequences; however, a sequence listing, CRF, and a letter of identity have not been filed in this 371 application and the record does not show that any of the above were filed in the associated PCT.

Applicant is required to comply with the Sequence Rules or otherwise amend the Drawings and the Specification to remove the sequences. Applicant is reminded that removal of material from the disclosure may result in new matter and is cautioned against introducing new matter.

Conclusion

This application is in condition for allowance except for the formal matters as set forth above.

Art Unit: 1631

Prosecution on the merits is closed in accordance with the practice under *Ex parte* Quayle, 1935 C.D. 11, 453 O.G. 213.

A shortened statutory period for reply to this action is set to expire **TWO MONTHS** from the mailing date of this letter.

Reasons for Allowance

The following is a statement of the reasons for the indication of allowable subject matter:

The prior art does not teach or fairly suggest a method of protein engineering including the steps of creating a computer database with a framework protein of 70 amino acids or less with 1-11 disulfide bonds, wherein the location and orientation of each side chain is represented by $C\alpha-C\beta$ and searching a database to identify amino acids of the framework protein to determine which amino acid residues are to be substituted to modify the framework protein.
